

**National Disaster Preparedness Baseline Assessment** 

#### Region: Lambayeque

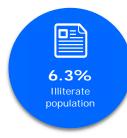

Region Capital: Chiclayo Region Area: 14,524 km²

Lambayeque is one of twenty-five regions in Peru. Located in northern coastal Peru, Lambayeque is home to many of Peru's pre-Incan ruins, though less a tourism destination than other parts of the country. Predominate economic activities include service industries, commerce and manufacturing. The region's capital is Chiclayo. As of 2015, the region's population was estimated at 1,260,650; with the highest percentage of its population residing in the province of Chiclayo. Relative to the rest of Peru, the population of Lambayeque has higher than average life expectancy (76.1 years) and access to improved water (88.1%), while having lower than average illiteracy (6.3%) and poverty (24.7%).

### Multi-Hazard Risk (MHR) 1

Score = 0.515, Rank = 9 of 25

Of the twenty-five regions of Peru, Lambayeque ranks 9th in multi-hazard risk (MHR = 0.515). Table 1 outlines the individual components that contribute to risk. As shown in the bar chart of Figure 1, Lambayeque's high multi-hazard risk is a function of its moderate multi-hazard exposure (MHE = 0.594), moderate vulnerability (V = 0.452), and high coping capacity (CC = 0.501). The ternary graph right shows that Lambayeque's exposure is slightly higher than the national average, while vulnerability and lack of coping capacity are similar.

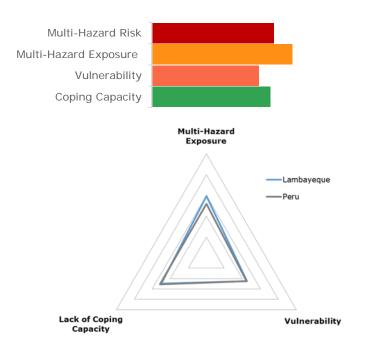

Figure 1. Components of the Multi-Hazard Risk Score compared to the national average.

<sup>&</sup>lt;sup>1</sup> Multi-Hazard Risk (MHR): An index that measures the likelihood of losses or disruptions to a region's normal function due to interaction between multi-hazard exposure, socioeconomic vulnerability and coping capacity. MHR = (MHE + V + (1-CC))/3. Values range from 0-1.

#### Components of Multi-Hazard Risk (MHR) <sup>2</sup>

Table 1. Scores and ranks for each component of the Multi-Hazard Risk Score.

Multi-Hazard Exposure (MHE)		Vul	nerability (V)	Coping Capacity (CC)		
Moderate		М	oderate	High		
Score	Rank (of 25)	Score	Rank (of 25)	Score	Rank (of 25)	
0.594	13	0.452	11	0.501	10	

### Multi-Hazard Exposure (MHE)<sup>3</sup>

Score = 0.594, Rank = 13 of 25

Lambayeque has moderate multi-hazard exposure relative to other regions of Peru (MHE = 0.594). This score is a function of both Raw and Relative MHE, as shown in Figure 2. The Raw MHE Score is an index reflecting the absolute value of population exposed to multiple hazards. This score can aid in understanding the overall scale of hazard exposure. The Relative MHE Score is an index reflecting the proportion of the region's base population exposed. This score can assist in the determination of how important hazards are, and can help prioritize disaster management activities across regions. Estimates of exposure by hazard type are summarized in Table 2.

Table 2. Estimated ambient population4 exposed to each hazard type.

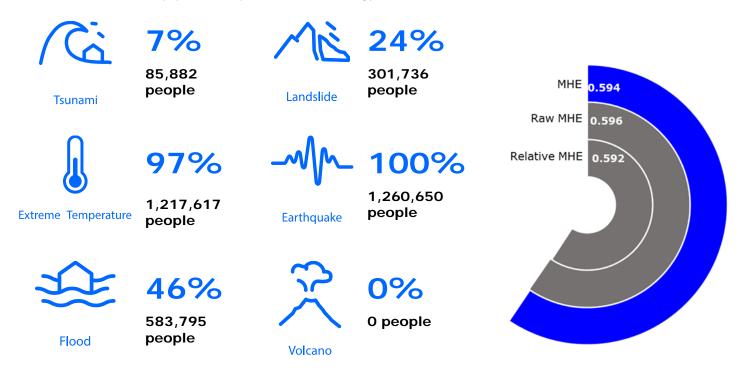

Figure 2. Average, raw and relative Multi-Hazard Exposure Scores.

 $<sup>^{2}</sup>$  MHR = (MHE + V + (1-CC))/3.

<sup>&</sup>lt;sup>3</sup> Multi Hazard Exposure (MHE): An index based on the estimated average exposure of the population to six hazard types: tsunamis, landslides, extreme temperature, earthquakes (MMI VII and above), floods and volcanos. Average exposure considers both raw average exposure and relative average exposure as a proportion of total population. Values range from 0-1.

<sup>&</sup>lt;sup>4</sup> Ambient Population: 24-hour average estimate of the population; typically differs from census population.

# Vulnerability (V) 5

#### Score = 0.452, Rank = 11 of 25

Lambayeque has moderate vulnerability relative to other Peruvian regions (V = 0.452). The bar chart on the right displays the composition of its overall Vulnerability Score. As shown, vulnerability primarily Lambayeque is driven by environmental stress, economic constraints, and gender inequality. The table below summarizes the individual within indicators each socio-economic theme.

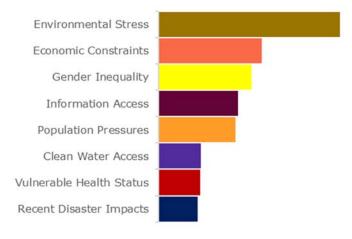

Figure 3. Components of the Vulnerability Score by relative contribution.

Table 3. Indicators of vulnerability grouped by theme.

	<i>y y</i>	, ,					
	Environmental Stress	16.6 % of total regional area with irrigation- fed agriculture	42.5 % of total regional area with severe erosion				
<b>**</b>	Vulnerable Health Status	17.1 Infant mortality rate per 1k births	<b>49.5</b> Maternal deaths per 100k births	76.1 Average life expectancy (years) at birth	14.2 % of children under 5 years of age that are malnourished	3.5 % of population with 1 or more disability	
0	Clean Water Vulnerability	88.1 % households with access to improved water	74.0 % households with access to flush toilets				
	Information Access Vulnerability	6.3 % of population 15yrs and older that are illiterate	9.5 Average years of schooling	69.2 % primary school enrollment	23.9 % households with internet	90.3 % households with television	<b>75.3</b> % households with radio
T\$	Economic Constraints	0.53 Ratio of dependents to working age population (15-64 years)	69.20 Ratio of average monthly household expenses to income	24.7 % of population monetarily impoverished			
ÔQ,	Gender Inequality	<b>0.51</b> Proportion of female representatives	<b>0.80</b> Ratio of female to male	<b>0.78</b> Ratio of female to male labor

government

<sup>&</sup>lt;sup>5</sup> Vulnerability (V): An index that measures the socioeconomic conditions associated with susceptibility to disruptions in a region's normal functions. Values range from 0-1.

Population Pressures 0.9% Average annual population change (2010-2015)

Recent Disaster Impacts 60.3 Average annual hazard-related deaths per 10k persons (2010-2014) 1.4
Average
annual
number of
homes
destroyed
by recent
hazards per
10k
persons
(20102014)

# Coping Capacity (CC) 6

Score = 0.501, Rank = 10 of 25

Lambayeque has a high coping capacity relative to other regions (CC = 0.501). The bar chart on the right displays the composition of its overall Coping Capacity Score. As shown, coping capacity in Lambayeque is hindered primarily by its environmental and economic capacities. The table below summarizes the individual indicators within each socio-economic theme.

Table 4. Indicators of coping capacity grouped by theme.

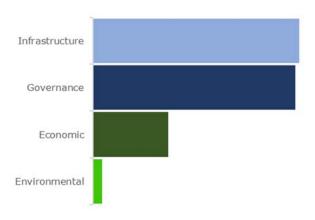

Figure 4. Components of the Coping Capacity Score by relative contribution.

Economic Capacity

\$906

Average monthly income (\$)

**\$10,554**Gross
domestic
product per
capita

Governance

1.42

Registered cases of sexual violence per 10k persons 3.73

Registered cases of missing persons per 10k persons 0.002

Average annual number of social conflicts per 10k persons (active and

resolved)

6,864

# of voters per 10k persons (2014 election)

Environmental Capacity

1.0

% protected or reforested land

<sup>&</sup>lt;sup>6</sup> **Coping Capacity (CC)**: An index that measures the systems, means and abilities of a region to absorb and respond to events that could potentially disrupt normal function. Values range from 0-1.

# Infrastructure Capacity

Healthcare Capacity	# of hospital beds per 10k persons	<b>26.1</b> # of nurses per 10k persons	# of physicians per 10k persons
Communications Capacity	27.5 % households with fixed phone line	88.1 % households with mobile phone	
Transportation Capacity	8.3 Port/airport density per 10,000 sq km	2,234.1 Road/rail density per 10,000 sq km	

### Resilience (R) <sup>7</sup>

Score = 0.524, Rank = 13 of 25

Resilience is a function of both vulnerability and coping capacity. Lambayeque's resilience is near the national average, and its moderate Resilience Score (R=0.524) is due to its moderate vulnerability and high coping capacity. The region's baseline indicators suggest a focus for resilience-building efforts. In Lambayeque, the thematic areas with the weakest relative scores are summarized in the table below. Readers can additionally consult Appendix 1 for a comprehensive assessment of its need for specific program types relative to other regions.

Table 5. The top 3 thematic areas with the weakest relative scores.

Environmental Capacity

<sup>&</sup>lt;sup>7</sup> **Resilience (R):** An index that offers a hazard-independent measure of current socio-economic conditions affecting the short-term ability to absorb, respond to, and recover from disruptions to a region's normal function. Values range from 0-1.
