# Region: San Martín

Region Capital: Myobamba
Region Area: 52,073 km^2

San Martín is one of twenty-five regions in Peru. Located in the northern interior of Peru, San Martín has an economy largely dominated by agriculture, animal husbandry and forestry, followed by service industries. Myobamba is the region capital. As of 2015, the region's population was estimated at 840,790; with the highest percentage of its population residing in the northern provinces of Moyobamba, Rioja and San Martín. Relative to the rest of Peru, the population of San Martín has lower than average life expectancy (71.3 years) and access to improved water (78.1%). San Martín also has higher than average poverty (30.0%) and illiteracy (8.1%).

840,790 Population (2015)	71.3 yrs Average life expectancy	30.0% Population in poverty	8.1% Illiterate population	78.1% Access to improved water

Multi-Hazard Risk (MHR) [1]

Score = 0.565, Rank = 7 of 25

Of the twenty-five regions of Peru, San Martín ranks 7th in multi-hazard risk (MHR = 0.565). Table 1 outlines the individual components that contribute to risk. As shown in the bar chart of Figure 1, San Martín's high multi-hazard risk is a function of its very high multi-hazard exposure (MHE = 0.754), low vulnerability (V = 0.404), and moderate coping capacity (CC = 0.464). The ternary graph at right shows that San Martín's exposure is significantly higher than the national average, while vulnerability and lack of coping capacity are close to the national averages for these components.

Figure 1. Components of the Multi-Hazard Risk Score compared to the national average.

---

[1] **Multi-Hazard Risk (MHR)**: An index that measures the likelihood of losses or disruptions to a region's normal function due to interaction between multi-hazard exposure, socioeconomic vulnerability and coping capacity. **MHR** = (MHE + V + (1-CC))/3. Values range from 0-1.

Components of Multi-Hazard Risk (MHR) [2]

Table 1. Scores and ranks for each component of the Multi-Hazard Risk Score.

Multi-Hazard Exposure (MHE)		Vulnerability (V)		Coping Capacity (CC)	
Very High		Low		Moderate	
Score	Rank (of 25)	Score	Rank (of 25)	Score	Rank (of 25)
0.754	4	0.404	16	0.464	14

Multi-Hazard Exposure (MHE) [3]

Score = 0.754, Rank = 4 of 25

San Martín has very high multi-hazard exposure relative to other regions of Peru (MHE = 0.754). This score is a function of both Raw and Relative MHE, as shown in Figure 2. The Raw MHE Score is an index reflecting the absolute value of population exposed to multiple hazards. This score can aid in understanding the overall scale of hazard exposure. The Relative MHE Score is an index reflecting the proportion of the region's base population exposed. This score can assist in the determination of how important hazards are, and can help prioritize disaster management activities across regions. Estimates of exposure by hazard type are summarized in Table 2.

*Table 2. Estimated ambient population[4] exposed to each hazard type.*

Tsunami — 0% — 0 people

Landslide — 99% — 835,268 people

Extreme Temperature — 76% — 638,143 people

Earthquake — 91% — 764,684 people

Flood — 89% — 750,108 people

Volcano — 0% — 0 people

MHE 0.754
Raw MHE 0.507
Relative MHE 1.000

Figure 2. Average, raw and relative Multi-Hazard Exposure Scores.

---

[2] **MHR** = (MHE + V + (1-CC))/3.
[3] **Multi Hazard Exposure (MHE)**: An index based on the estimated average exposure of the population to six hazard types: tsunamis, landslides, extreme temperature, earthquakes (MMI VII and above), floods and volcanos. Average exposure considers both raw average exposure and relative average exposure as a proportion of total population. Values range from 0-1.
[4] **Ambient Population**: 24-hour average estimate of the population; typically differs from census population.

Vulnerability (V) [5]

Score = 0.404, Rank = 16 of 25

San Martín has low vulnerability relative to other Peruvian regions (V = 0.404). The bar chart on the right displays the composition of its overall Vulnerability Score. As shown, vulnerability in San Martín is driven primarily by clean water access, gender inequality, and information access. The table below summarizes the individual indicators within each socio-economic theme.

Figure 3. Components of the Vulnerability Score by relative contribution.

Table 3. Indicators of vulnerability grouped by theme.

	Environmental Stress	**1.0** % of total regional area with irrigation-fed agriculture	**0.1** % of total regional area with severe erosion			
	Vulnerable Health Status	**19.2** Infant mortality rate per 1k births	**73.1** Maternal deaths per 100k births	**71.3** Average life expectancy (years) at birth	**15.5** % of children under 5 years of age that are malnourished	**3.8** % of population with 1 or more disability
	Clean Water Vulnerability	**78.1** % households with access to improved water	**40.3** % households with access to flush toilets			
	Information Access Vulnerability	**8.1** % of population 15yrs and older that are illiterate	**8.3** Average years of schooling	**77.5** % primary school enrollment	**9.2** % households with internet	**72.9** % households with television	**70.9** % households with radio
	Economic Constraints	**0.53** Ratio of dependents to working age population (15-64 years)	**55.43** Ratio of average monthly household expenses to income	**30.0** % of population monetarily impoverished		
	Gender Inequality	**0.46** Proportion of female representatives in local government	**0.73** Ratio of female to male secondary enrollment	**0.69** Ratio of female to male labor participation		

[5] **Vulnerability (V)**: An index that measures the socioeconomic conditions associated with susceptibility to disruptions in a region's normal functions. Values range from 0-1.

	Population Pressures	**-0.4** % Average annual population change (2010-2015)	
	Recent Disaster Impacts	**332.3** Average annual hazard-related deaths per 10k persons (2010-2014)	**3.1** Average annual number of homes destroyed by recent hazards per 10k persons (2010-2014)

Coping Capacity (CC) [6]

Score = 0.464, Rank = 14 of 25

San Martín has a moderate coping capacity relative to other regions (CC = 0.464). The bar chart on the right displays the composition of its overall Coping Capacity Score. As shown, coping capacity in San Martín is hindered primarily by its economic and infrastructure (especially healthcare) capacities. The table below summarizes the individual indicators within each theme.

Figure 4. Components of the Coping Capacity Score by relative contribution.

Table 4. Indicators of coping capacity grouped by theme.

	Economic Capacity	**$967** Average monthly income ($)	**$7,752** Gross domestic product per capita	
	Governance	**2.06** Registered cases of sexual violence per 10k persons	**0.04** Registered cases of missing persons per 10k persons	**0.003** Average annual number of social conflicts per 10k persons (active and resolved)	**6,576** # of voters per 10k persons (2014 election)
	Environmental Capacity	**18.5** % protected or reforested land		

---

[6] **Coping Capacity (CC)**: An index that measures the systems, means and abilities of a region to absorb and respond to events that could potentially disrupt normal function. Values range from 0-1.

Infrastructure Capacity

	Healthcare Capacity	**12.6** # of hospital beds per 10k persons	**8.6** # of nurses per 10k persons	**5.2** # of physicians per 10k persons
	Communications Capacity	**8.2** % households with fixed phone line	**81.3** % households with mobile phone	
	Transportation Capacity	**1.0** Port/airport density per 10,000 sq km	**1,001.3** Road/rail density per 10,000 sq km	

Resilience (R) [7]

Score = 0.530, Rank = 12 of 25

Resilience is a function of both vulnerability and coping capacity. San Martín's resilience is near the national average, and its moderate Resilience Score (R = 0.530) is due to its low vulnerability and moderate coping capacity. The region's baseline indicators suggest a focus for resilience-building efforts. In San Martin, the thematic areas with the weakest relative scores are summarized in the table below. Readers can additionally consult Appendix 1 for a comprehensive assessment of its need for specific program types relative to other regions.

Table 5. The top 3 thematic areas with the weakest relative scores.

Gender Inequality   **Healthcare Capacity**   **Transportation Capacity**

---

[7] **Resilience (R):** An index that offers a hazard-independent measure of current socio-economic conditions affecting the short-term ability to absorb, respond to, and recover from disruptions to a region's normal function. Values range from 0-1.
