## RESILIENCE (R)

RANK: 59 / 77 DISTRICTS ASSESSED

SCORE: 0.405

Pyuthan's score and ranking are due to High Vulnerability combined with Low Coping Capacity scores.

Below are the four thematic areas with the weakest relative scores:

Food Insecurity

Economic Constraints

Communications Capacity

Energy Capacity

## KEY FACTORS INFLUENCING RESILIENCE

### Food Insecurity

The changing frequency and intensity of disasters can expose the entire food system to supply chain disruptions. Promoting resilient agricultural systems through training of local farmers in sustainable practices (e.g., soil improvement, erosion reduction) and improving efficiencies in food marketing, storage, delivery, and waste management will help to increase the nutrition and food security of present and future generations.

### Economic Constraints

Economic constraints have individual, household, community, and district-wide influence. Limitations on available financial resources reduce opportunities to invest in mitigation and preparedness measures and limit the ability to facilitate short- and long-term recovery.

### Communications Capacity

The density, diversity, resilience, and quality of communications infrastructure influence how subnational- and local-level populations are able to facilitate effective and coordinated communication.

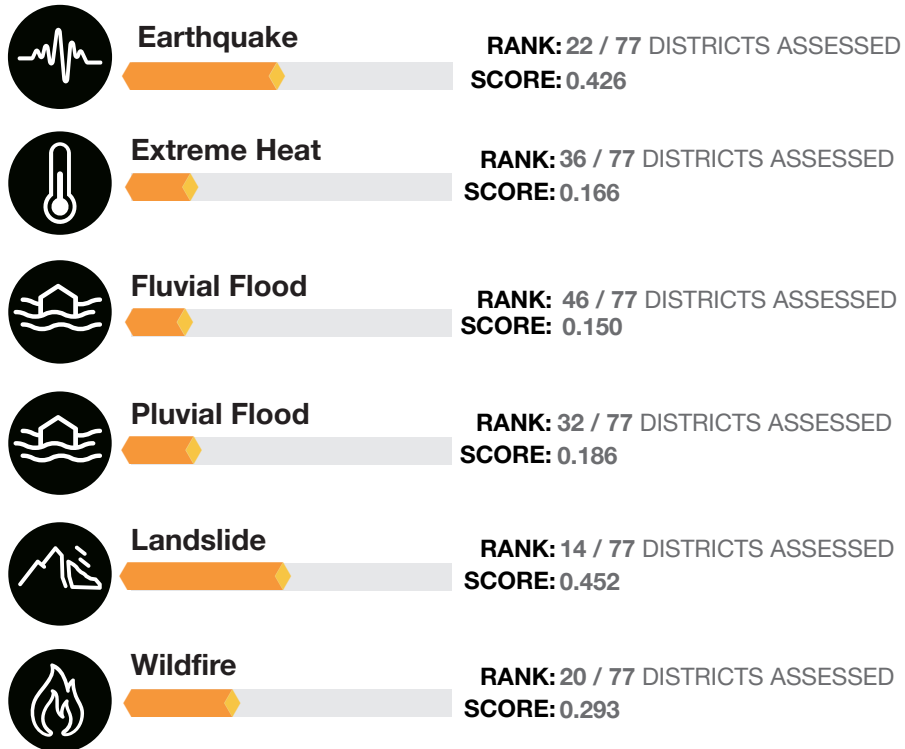

### Energy Capacity

Homes, businesses, industry, and government all rely on access to energy resources for continuity of daily activities. Expanding, strengthening, and securing the energy network and increasing the availability and quantity of energy reserves will contribute to economic development and increase the speed of recovery processes in the aftermath of a disaster.

## HAZARD-SPECIFIC RISK (HSR)

## MULTI-HAZARD RISK (MHR)

**24 / 77**

RANK WITHIN DISTRICTS  
Score: 0.580

Pyuthan's score and ranking are due to Moderate Multi-hazard Exposure combined with High Vulnerability and Low Coping Capacity scores.
